IN THE SPECIFICATION:

Please amend Page 23, Paragraph [0101] to read as follows:

[0101] In reference to Fig. [[3]] 6, the first roller 44 and the first pressing roller 45 having two or more rotating projections (44A-44F and 45A-45F) radially protruding from the surface of the first roller 44 and the first pressing roller 45. The rotating projections are arranged in an staggered, alternating, or offset manner to allow the first roller and the first pressing roller to grasp a discharged banknote in a wave-like manner. The description wave-like refers to the alternating up and down deflections perpendicular to the direction of travel between the opposing first roller 44 and first pressing roller 45.
